

FOR IMMEDIATE RELEASE:

Wilwood Disc Brakes Releases 1970-76 Porsche 914 Front and Rear Big Brake Kits

Camarillo, CA • April 2024

Many Porsche 914 sports cars that continue to be driven today are modified with considerably more power. With added power comes the need to upgrade the braking system, and Wilwood Disc Brakes is the perfect solution for front and rear kits. Forged aluminum four piston calipers, brackets, and hubs, combined with oversize vented rotors, upgrade your 1970-76 Porsche 914's braking performance. Wilwood's forged aluminum components yield a 53% reduction in unsprung rotating mass compared to the smaller original equipment brakes.

Rigid, motorsports-proven, **Powerlite** calipers feature piston sizes explicitly designed for proper front-to-rear bias. Premium proprietary **Spec37** iron alloy directional 289mm (11.38") x 20mm (0.81") rotors are a larger diameter and wider than the solid factory rotors while offering 36 curved vanes to dissipate heat. Rotor options are plain face, or SRP drilled and slotted.

Rear kits feature Wilwood's mechanical **MC4** parking brake for right and left-hand application and include the necessary cable kit. Calipers are available in gloss red or black powder coat, or 24 optional colors (additional charges apply). Street-friendly **BP-10** performance brake pads are included, and other compounds are available for your application. NOTE: these kits must be used with a 914/6 or 911, 19mm master cylinder.

MSRP: starts at \$1,814.33
