

## Drag Race Front Brake Kits for **Spindle-Mount Wheels** with AFCO and Santhuff's Struts

Every pound counts in drag racing. Wilwood Racing's new front kits for struts with spindle-mounted wheels are some of the lightest brakes available, at less than six pounds per wheel. That includes the billet aluminum, Dynalite single-piston caliper, 10.00" drilled rotor, hat, brackets, brake lines and hardware.

Despite their small size and low weight, these kits contribute a significant amount of stopping power:

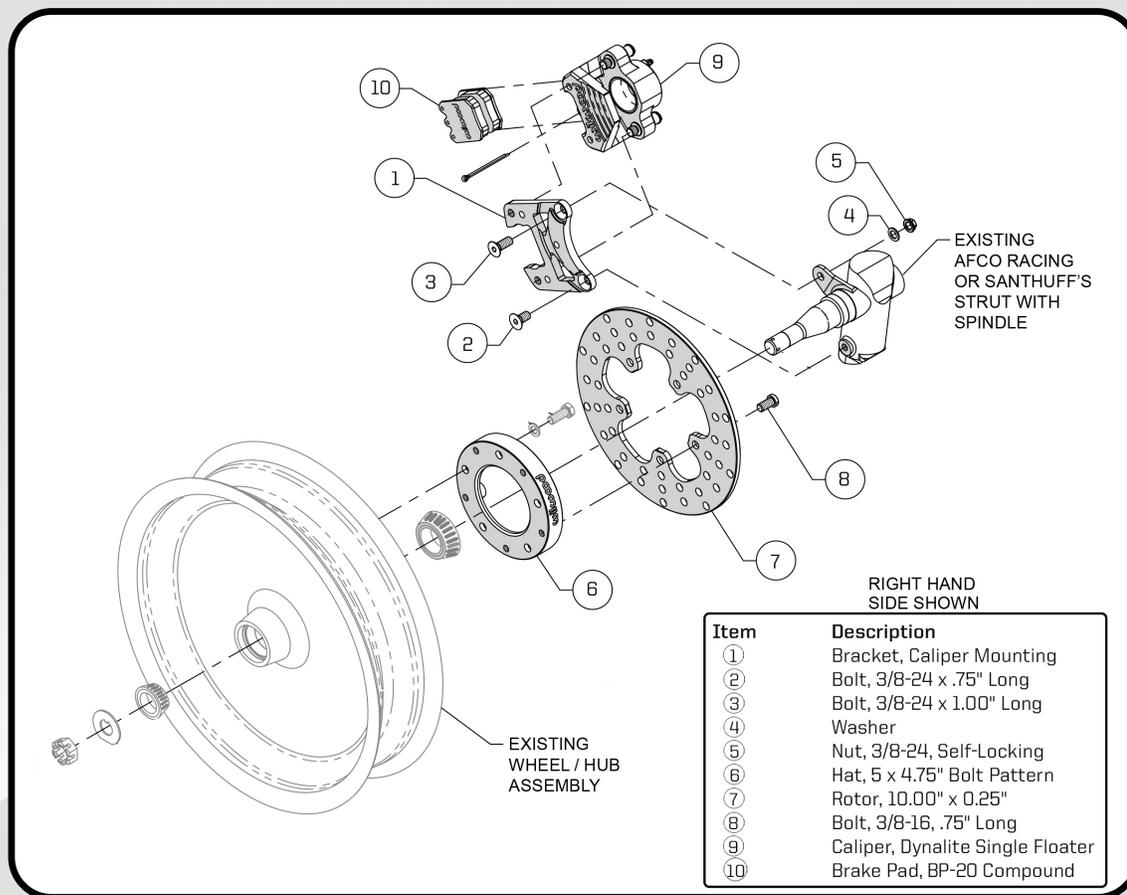

- Compact billet aluminum Dynalite single piston floating caliper provides clamping force without excessive weight
- Hard anodized caliper finish resists internal wear and protects against corrosion
- 10.00" x 0.25" proprietary steel alloy rotors, drilled for weight, provide high friction and resist thermal distortion
- Forged aluminum hats with proper offsets to mount rotors directly on spindle-mounted wheel, saving weight
- Kits weigh less than six pounds per wheel, including brackets and hardware
- Engineered with offsets to fit popular AFCO and Santhuff's drag racing struts, and various spindle-mount wheel brands
- High-performance, fade-resistant **SmartPad** BP-20 compound brake pads included (other compounds available)
