

FOR IMMEDIATE RELEASE:

Wilwood Disc Brakes introduces new Master Cylinder Firewall Mounting Kit

Camarillo, CA • November 2013

Wilwood Disc Brakes is proud to introduce a new billet aluminum Master Cylinder Firewall Mounting Kit, part number 250-13167. This mounting kit is specifically designed to work in conjunction with Wilwood's Forward Mount Brake and Clutch Pedal Assembly and Flange Mounted Compact Remote Master Cylinders.

The kit allows precision mounting of the pedal and master cylinders to the firewall, and leaves the engine compartment with a high-tech pro-finish look. The mounting plates recess the master cylinder mounting surface by .25", which allows more clearance in the engine compartment. Both the engine compartment faceplate and interior side mounting plate are media burnished billet aluminum. The kit is designed to accept a firewall material thickness range of .040" - .080", and requires a minimum flat area the size of the 4" x 8" faceplate. Also provided is all mounting hardware, including attractive, corrosion resistant stainless steel 12 point fasteners, and detailed installation instructions.

All of Wilwood's performance brake components are loaded with cutting edge technology built on decades of domination in world motorsports, and proven reliable through Zero PPM defect supply to OEM's. This kit will not only exceed your braking demands, on and off the track, but also enhance the appearance of your engine compartment.

For more information contact: Wilwood Engineering at (805) 388-1188 and request to speak with Erika Gordillo for marketing issues, or Andy Fritts for technical questions. Also, Wilwood's website is accessible at www.wilwood.com or e-mail customerreply@wilwood.com
