

**FOR IMMEDIATE PRESS RELEASE:
Forged Billet Superlite Caliper from Wilwood**

Camarillo, CA July 28,2010

Wilwood's [Forged Billet Superlite caliper](#) is designed for short track, late model, modified and open wheel competition as well as road racing, off road, rally and sport driving applications. It represents the latest in brake manufacturing innovations from Wilwood. Stress-flow forging eliminates the breaks and interruptions of the internal grain structure that occur when machining straight billet block. The FEA design provides substantial improvements in strength and performance while increasing resistance to deflection and caliper separation under heavy load.

Features of this system include SRS Squeal Reduction System with stainless steel bridge plates, high temperature seals and stainless steel pistons and four-corner two piece bleed screws. Standard race calipers feature a bright black anodized finish for a high tech look that resists corrosion. The full range of PolyMatrix pad compounds is available for this caliper.

BNGL4R 120-8000-RRD
