

# STARLITE "55" GM OFFSET HUBS

**The advanced design Starlite "55" Aluminum Wide 5 Racing Hubs are now available with GM Caliper Offsets.**

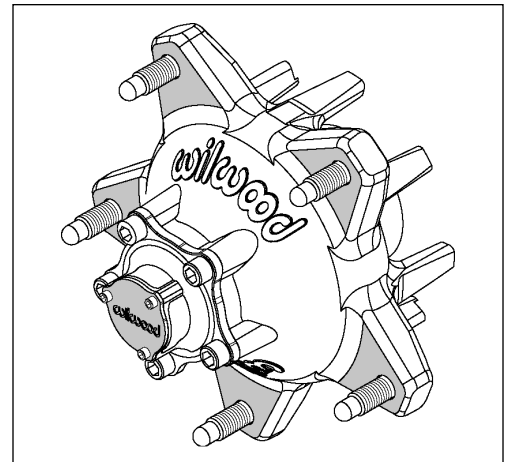

There's no longer a reason to gamble on reliability or pay high prices to reduce your rotating and unsprung weight. Starlite "55" hubs offer the high strength of aluminum in a new configuration that matches or beats the weight of many magnesium hub assemblies.

## **Starlite "55" Hub Features:**

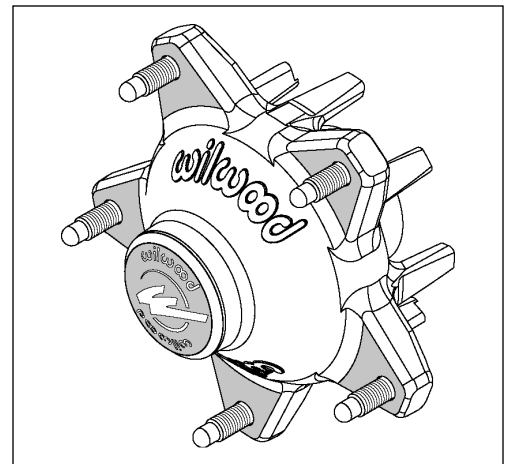

**Starlite "55" Rear Hubs** with solid studs and bearing races installed, is a mere 6.99 pounds. That's nearly a pound lighter than eight bolt aluminum hubs, and lighter than some magnesium hubs! When coupled with the additional lighter weight of the Five Bolt Drive Flanges, the entire assembly matches or beats the weight of most magnesium eight-bolt drive hub assemblies.

**Starlite "55" Front Snap-Cap Hubs** eliminate the unnecessary weight of bolts and bolt bosses for hub cap retention. The drive bolt bosses are machined away and the hub is fitted with a special high strength, lightweight composite Snap-Cap dust cover. No bolts are required and the complete assembly weighs in at only 6.85 pounds.

**All Starlite "55" Hubs** are shipped with studs and bearing races installed. The Starlite "55" uses all conventional wide 5 bearings, seals and mounting dimensions. Front hubs are shipped with Snap-Cap dust covers included. All drive flange kits are shipped with high strength lock-wire drilled 12 point cap screws and lock washers. The new Starlite "55" GM offset hubs are a direct replacement for the traditional Starlite eight bolt flange GM offset hubs.
