

# PROMATRIX *Spec 37* TRACK ROTOR KITS C6 Z06 AND GRAND SPORT CORVETTES

### Models Covered:

- All 2005 and newer C6 Z06 and Grand Sport models equipped with factory six-piston calipers and 14.00" discs.
- All 1997 and newer C5 or C6 production front spindles that have been upgraded with the later model C6 Z06 / Grand Sport six-piston calipers and 14.00" discs.

### Kit Features:

- Two-piece, direct replacement 14.00" x 1.25" performance front rotor assemblies are precision machined to exact OE dimensions for competition or custom use with the OE six-piston calipers. These rotors are fully compatible with all pad types, ABS, and dynamic handling controls.
- *Spec 37* extreme duty iron alloy discs provide the highest degree of durability in sustained high heat against thermal distortion, fatigue, and wear.

### Kit Option: ProMatrix SV-GT *Spec 37* Competition Rotor Kits

**P/N 140-12496**

- For all out competition, **SV-GT** rotor kits provide the highest degree of thermal stability for sustained high temperature competition.
- Using our championship proven 72 staggered vane design, each rotor is fully detail machined, face slotted for pad cleaning, and individually dynamic balanced for smooth operation at all speeds.

### Kit Option: ProMatrix SRP *Spec 37* Street & Track Performance Rotor Kits

**P/N 140-12496-D**

- For the street or track fun enthusiast, **SRP** rotors provide complimentary high-tech style inside the wheel with our signature drill and slot pattern, plus the added durability of the *Spec 37* alloy for those occasional high heat cycles during performance driving days at the track.
- Our black E-coat finish provides full surface bonded coverage against corrosion on all edges and internal cooling vanes to keep the rotors looking clean inside the wheel.

### Billet Aluminum GT / SRP Series Rotor Mounting Hats

- Billet aluminum hats provide secure mounting of the rotors to the hubs without adding unnecessary weight. More iron can then be concentrated in the rotor faces and cooling vanes for durability, and still provide a weight savings of up to 4.5 pounds per side.
- Hat kits include premium grade 12 point lock-wire drilled stainless steel rotor bolts to provide corrosion-free and positive retention of the rotor to the hat.
