

FRONT / REAR PROMATRIX UPGRADE ROTOR KIT FOR ASTON MARTIN

Models Covered:

- 2005 - Present Aston Martin DB9
- 2006 - Present Aston Martin Vantage

Kit Features:

- Upgrade from Original Equipment (OE) rotors to SV-GT 14.00" (front) and GT 13.00" (rear) curved vane, premium grade, long grain, carbon iron rotors.
- A substantial weight saving of 12 pounds per vehicle over the OE rotor setup.
- Simple bolt-on installation with no modifications required.
- Fully compatible with OE brake calipers, brake pads, master cylinder output, and ABS functionality.

Component Features:

GT Series Curved Vane Rotors

- GT competition series rotors feature full detail machining with asymmetrical slots in the faces. GT rotors provide the highest degree of durability and longer life for repeated hard braking and high temperature use. Rotors are individually dynamic balanced for smooth operation at all speeds.
- The superior heat absorption and dissipation characteristics of these heavy wall directional vane rotors are the keys to preventing heat fade and realizing long service life from the rotors and pads.
- Front setup features 14.00" x 1.25" SV-GT **Spec 37** staggered directional curved vane rotors.
- The rear features 13.00" x 1.10" GT directional curved vane rotors.

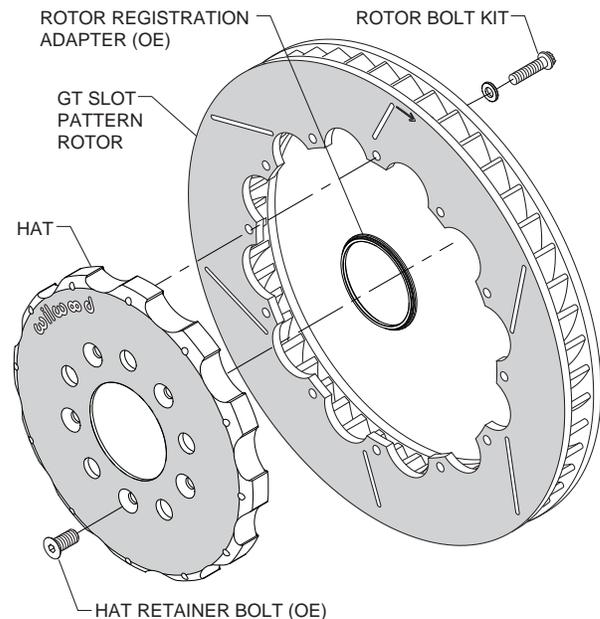

Forged Aluminum GT Mounting Hats

- Billet aluminum hats provide secure mounting of the rotors to the axle hubs without adding unnecessary weight. More iron can then be concentrated in the rotor faces and cooling vanes for durability, and still provide a weight savings over OE hats.
- Black E-coat finish resists corrosion while adding to the aggressive competition look inside the wheel.

Mounting Hardware

- Bolt kits include premium grade 12 point stainless steel rotor bolts to provide corrosion-free and positive retention of the rotor to the hat.
