

FOR IMMEDIATE RELEASE:

Wilwood Disc Brakes Introduces New Satin Series Rotors for Harley-Davidson® Motorcycles

Camarillo, CA • August, 2014

Wilwood's new Satin Series stainless steel rotors take Harley® braking to the next level. Available in brushed natural Satin Stainless or and Black Satin e-coat finish, these rotors are a powerful duo of performance and style. Best suited for production bikes and full customs using 2008-Present Harley-Davidson® OE dimension front brake components.

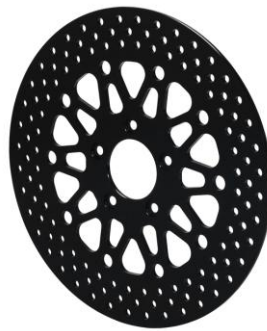

Designed for racing but perfect for the road, each rotor is precision ground to exacting tolerance for smoother braking. The proprietary finishing process on select stainless alloy provides an appealing, high-tech finish, with the stopping power you expect from the world leader in high performance brake systems.

The new exclusive Black Satin rotors provide the added benefits of enhanced corrosion resistance and uninhibited pad bedding, with a deeper color and thorough protection on all rotor surfaces.

Wilwood's Satin Series rotors can be used as a direct OE replacement with factory calipers, or can be coupled with Wilwood GP Series calipers for the ultimate combination of all-out stopping power and distinctive show-winning style.
