

FOR IMMEDIATE RELEASE:

Wilwood announces new front Disc Brake Kits for Fords, Mercury's, T-Birds, and Edsels

Camarillo, CA • October, 2014

Wilwood has developed four new kit configurations for upgrading the performance and styling of brake systems on classic late 1950's and 1960's era full size Fords, Mercury's, T-Birds, and Edsels. Disc brake kits covering applications from basic driver upgrades, to full blown Pro Touring style big brake customs, are now available for use with the original equipment drum brake spindles and several factory disc brake models. Options for caliper finish and rotor style, a full range of pad compounds, and matching kits for the popular big and small bearing Ford rear axles, can custom tailor these easy bolt-on kits to all types of enthusiast driving. M.S.R.P. begins at \$643.99

140-13653-R

140-13654

140-13630-DR / 140-13655-DR

From the company headquarters and expansive manufacturing facility located in Camarillo, CA, Wilwood Engineering has been a leading manufacturer of high-performance brake systems and premium quality components since 1977. For nearly four decades, Wilwood has played a dominant role at all levels of motorsports and the custom car hobbies, while providing original equipment brake system solutions for all types of industrial and recreational equipment applications. These new disc brake kits incorporate Wilwood's legacy of brake system expertise with the latest cutting edge manufacturing materials and technology.
