

**FOR IMMEDIATE PRESS RELEASE**  
**New DynaPro Radial-Mount Caliper from Wilwood**

**Camarillo, CA June 3, 2010**

Wilwood Engineering brings Forged Billet technology to the Rally, Racing and the high performance vehicle markets in a strong, compact package. This new 4-piston [DynaPro caliper](#) has been engineered for radial mounting in a stress-flowed billet forging. The aircraft quality, corrosion resistant 3/8" cross-bolts provide more strength for lower deflection under load than cast or machined billet block designs.

The DynaPro features Wilwood's exclusive Squeal Reduction System (SRS): stainless steel, anti-rattle wear plates with quick-clip pad retention. Piston dust seals provide protection from contamination. Available bore sizes range from 1.25" to 1.75". The DynaPro accepts .81" or 1.00" rotor widths, fitting diameters between 9.5" and 12.25". The DynaPro radial mount design easily adapts to a wide variety of rally, sports cars, sports racing, and high performance vehicle applications.
