ASSEMBLY INSTRUCTIONS
FOR
WILWOOD ELECTRONIC PARKING BRAKE (EPB) SYSTEM
WIRING INSTALLATION INSTRUCTIONS
FOR USE WITH WILWOOD REAR EPB CALIPER
PARKING BRAKE KITS

DISC BRAKES SHOULD ONLY BE INSTALLED BY SOMEONE EXPERIENCED AND COMPETENT IN THE INSTALLATION AND MAINTENANCE OF DISC BRAKES
READ ALL WARNINGS

WARNING
IT IS THE RESPONSIBILITY OF THE PERSON INSTALLING ANY BRAKE COMPONENT OR KIT TO DETERMINE THE SUITABILITY OF THE COMPONENT OR KIT FOR THAT PARTICULAR APPLICATION. IF YOU ARE NOT SURE HOW TO SAFELY USE THIS BRAKE COMPONENT OR KIT, YOU SHOULD NOT INSTALL OR USE IT. DO NOT ASSUME ANYTHING. IMPROPERLY INSTALLED OR MAINTAINED BRAKES ARE DANGEROUS. IF YOU ARE NOT SURE, GET HELP OR RETURN THE PRODUCT. YOU MAY OBTAIN ADDITIONAL INFORMATION AND TECHNICAL SUPPORT BY CALLING WILWOOD AT (805) 388-1188, OR VISIT OUR WEB SITE AT WWW.WILWOOD.COM. USE OF WILWOOD TECHNICAL SUPPORT DOES NOT GUARANTEE PROPER INSTALLATION. YOU, OR THE PERSON WHO DOES THE INSTALLATION MUST KNOW HOW TO PROPERLY USE THIS PRODUCT. IT IS NOT POSSIBLE OVER THE PHONE TO UNDERSTAND OR FORESEE ALL THE ISSUES THAT MIGHT ARISE IN YOUR INSTALLATION.

RACING EQUIPMENT AND BRAKES MUST BE MAINTAINED AND SHOULD BE CHECKED REGULARLY FOR FATIGUE, DAMAGE, AND WEAR.

DISC BRAKES SHOULD ONLY BE INSTALLED BY SOMEONE EXPERIENCED AND COMPETENT IN THE INSTALLATION AND MAINTENANCE OF DISC BRAKES

WARNING
DO NOT OPERATE ANY VEHICLE ON UNTESTED BRAKES!
SEE MINIMUM TEST PROCEDURE WITHIN

ALWAYS UTILIZE SAFETY RESTRAINT SYSTEMS AND ALL OTHER AVAILABLE SAFETY EQUIPMENT WHILE OPERATING THE VEHICLE

IMPORTANT • READ THE DISCLAIMER OF WARRANTY INCLUDED IN THE KIT

NOTE: Some cleaners may stain or remove the finish on brake system components. Test the cleaner on a hidden portion of the component before general use.
Important Notice - Read This First

Before any tear-down or disassembly begins, review the following information:

- **Warning**: This electronic parking brake system is intended to function as a parking brake and not as an emergency stop brake. However, it is possible to actuate the EPB at any time and speed. Actuating the EPB while the vehicle is moving may cause the rear wheels to lock up and skid which may lead to a reduction in vehicle control.

- Installation of this kit should only be performed by individuals experienced in the installation and proper operation of disc brake systems.

- Due to OEM production differences and other variations from vehicle to vehicle, the fastener hardware and other components in this kit may not be suitable for a specific application or vehicle.

- It is the responsibility of the purchaser and installer of this kit to verify suitability / fitment of all components and ensure all fasteners and hardware achieve complete and proper engagement. Improper or inadequate engagement can lead to component failure.

Photographic Tip

**Important and highly recommended**: Take photos of brake system before disassembly and during the disassembly process. In the event, trouble-shooting photos can be life savers. Many vehicles have undocumented variations, photos will make it much simpler for Wilwood to assist you if you have a problem.

Installation Instructions

Component mounting

• Determine mounting locations for the EPB control unit, EPB control switch, and EPB calipers. The wiring harness routing should be taken into account when determining the component mounting locations.

• EPB CONTROL UNIT (ECU) - Securely mount the EPB control unit in a suitable location inside the vehicle, such as under the dash. Be sure to allow adequate access to the control unit cable connector. See Figure 1 for mounting dimensions.

• EPB CONTROL SWITCH - Mount the EPB switch in an easily accessible location within arm’s reach of the driver. The switch mounts to a panel with a .875” diameter hole. See Figure 2 for mounting dimensions.

• EPB CALIPER - Mount the EPB calipers per the installation instructions included with your specific Wilwood brake kit, reference Figure 3. EPB calipers are left and right handed, however they can be used on either side of the vehicle to best suit your specific application.

• EPB WIRING HARNESS - All wiring harness leads are labeled – refer to wiring diagram, Figure 4. Carefully route harness cables/wires to prevent contact with moving or rotating components and away from heat sources and pinch points. **NOTE:** Wilwood EPB harness is designed for use in many different vehicle applications and it is the installer’s responsibility to properly route cables/wires and ensure adequate clearance and retention for EPB components.

![Figure 1. EPB Control Unit](image1)

![Figure 2. Control Switch](image2)

Wiring installation - Refer to wiring diagram, Figure 4

• Disconnect negative (ground) cable from the battery.

• **NOTE:** Most wires in the EPB harness may be shortened or lengthened if needed to suit a specific application. Avoid lengthening the BATTERY (+) and GND (ground) wires. Use good practices. All wire splices should be soldered and covered with shrink tubing. When lengthening wires, always match the gauge of the new wire to the existing harness wire gauge.

• Connect the RIGHT-MOTOR connector to the EPB caliper motor mounted on the right hand side of the vehicle, and the LEFT-MOTOR connector to the left side. This will assure the correct caliper can be identified in the event of a caliper related fault code from the ECU.

• Carefully connect the large ECU connector to the EPB control unit.

• Connect the ACC lead to an ignition ON or Accessory power source, usually at the fuse panel. Do NOT connect this lead directly to battery power.

• The EPB switch connector must be indexed to the back of the switch by aligning the connector lock tab with the mating feature on the switch, as shown in Photo 2.
Installation Instructions (Continued)

• Match the 6 harness wires for the switch to the corresponding 8 pigtail wires on the switch connector, as shown in the wiring diagram. **NOTE:** The three red/white wires on the switch pigtail are to be connected to the single red/white wire in the harness. Solder all connections and cover with shrink tubing.

• Attach the GND (ground) wire to a clean solid ground point location or post. A good ground is necessary for proper operation of this EPB system as all of the EPB motor amperage must travel through this ground point.

• The BATTERY (+) wire must be attached directly to the positive (+) terminal on the battery or to a primary 12V+ power post that is directly fed by a heavy gauge battery cable, such as the starter solenoid battery terminal.

• **Caution:** The 40 amp fuse included in the new wiring harness must remain in the 12V+ circuit. Do not bypass or remove this fuse from the circuit.

• If desired, an existing instrument cluster “brake” light may be utilized by adding a new customer supplied relay circuit triggered by the gray/yellow switch wire labeled LED (-). **Caution:** The LED (-) wire does not supply 12V power, it only completes a ground when activated, so the relay will need 12V power supplied from another source.

• Reconnect negative cable to the battery and test EPB function per the following instructions.
Installation (Continued)

SOLDERED CONNECTIONS

Figure 4. EPB Wiring Diagram
**EPB operation**

- The EPB control switch is momentary – there is no need to hold the switch in position to operate the EPB. Rotate the switch clockwise to engage parking brake and counter-clockwise to release.

- The red indicator light on the EPB control switch will illuminate when the EPB is engaged, but only while the ignition is ON. The light will go out once when the EPB is released. If the indicator light flashes, there is a fault in the system. Refer to the troubleshooting section below.

- Complete brake kit installation per the instructions included with your specific Wilwood brake kit.

- Once the installation is complete, test parking brake in a safe area, first on a flat surface by pushing on the vehicle, then on a slight incline, followed by a steeper incline.

**Troubleshooting**

- In the event of a fault in the EPB system, the indicator light on the switch will flash out a two-digit diagnostic trouble code. Reference Table 1 below, determine the cause of the fault based on the two-digit fault code. **NOTE:** Fault codes are not stored and are reset after the ignition is turned OFF. If a fault code appears (flashing light), turn ignition OFF and back ON. If flashing continues, count flashes to read faulty code.

- If you still are having problems with the installation, contact your Wilwood retailer where the product was purchased. Additional technical support is available by calling Wilwood Sales and Technical department at (805) 388-1188 or e-mail additional assistance at: info@wilwood.com.

Brake Testing

WARNING • DO NOT DRIVE ON UNTESITED BRAKES
BRAKES MUST BE TESTED AFTER INSTALLATION OR MAINTENANCE
MINIMUM TEST PROCEDURE

• Make sure pedal is firm: Hold firm pressure on pedal for several minutes, it should remain in position without sinking. If pedal sinks toward floor, check system for fluid leaks. DO NOT drive vehicle if pedal does not stay firm or can be pushed to the floor with normal pressure.

• At very low speed (2-5 mph) apply brakes hard several times while turning steering from full left to full right, repeat several times. Remove the wheels and check that components are not touching, rubbing, or leaking.

• Carefully examine all brake components, brake lines, and fittings for leaks and interference.

• Make sure there is no interference with wheels or suspension components.

• Drive vehicle at low speed (15-20 mph) making moderate and hard stops. Brakes should feel normal and positive. Again check for leaks and interference.

• Always test vehicle in a safe place where there is no danger to (or from) other people or vehicles.

• Always wear seat belts and make use of all safety equipment.

Parking Brake

WARNING • PARKING BRAKE

• The holding ability of the brake should be tested by stopping on a sloping surface and applying the parking brake while holding car with the hydraulic foot brake. This should be accomplished both facing up and down hill.

• Do not rely exclusively on the parking brake to hold the car; Curb wheels as recommended by the applicable diagram and put gear selector in park, or shift into first gear or reverse with a manual transmission.

• Diagram A - When parking facing downhill, turn front wheels towards the curb or right shoulder. This will keep from rolling into traffic if the brakes become disengaged.

• Diagram B - Turn the steering wheel to the left so the wheels are turned towards the road if you are facing uphill with a curb. The tires will catch the curb if the car rolls backward.

• Diagram C - When facing uphill without a curb, turn the wheels sharply to the right. If the vehicle rolls, it will go off the road rather than into traffic.

• When parking on a hill, always set the parking brake and move the gear selector into park, or shift into first or reverse gear if your vehicle has a manual transmission.
