

ALUMINUM 2.00" DROP FRONT ProSpindle Kit with Hub FOR SELECT Wilwood Brake Kits 12.19" TO 15.00"

Wilwood's new precision-engineered ProSpindle Hub Kit incorporates many new features. It provides a durable and safe method to improve handling and brake performance and complements Wilwood's custom fit big brake kit options from 12.19" to 15.00" rotor diameters.

The strong forged aluminum ProSpindle provides a 2.00" drop to the chassis ride height. It also features a sealed bolt-on bearing hub to simplify installation and reduce maintenance, and a dual-pattern bolt circle for mounting 5 on 4.75" or 4.50" wheels.

A Mustang II-style blueprint allows for a wide range of fitment for hot rods, street rods, kit cars, drag cars, and other custom or competition vehicles.

PROSPINDLE:

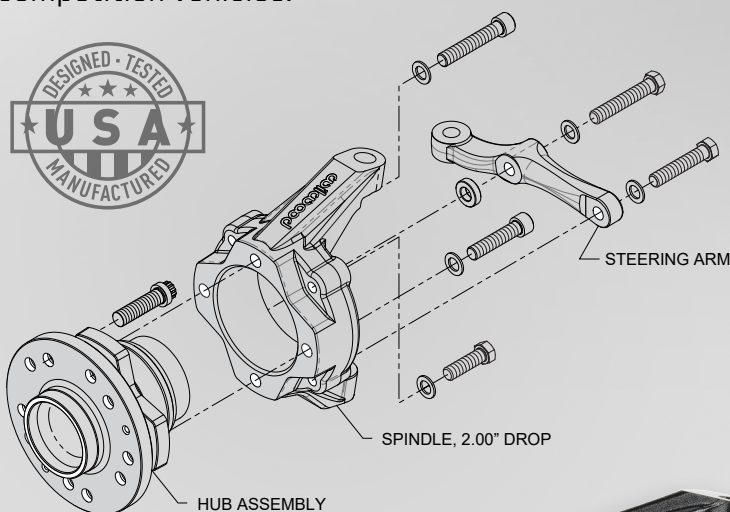

- A 2.00" drop upgrades handling and improves the front suspension while maintaining steering geometry
- Forged aluminum knuckle and bolt-on steering arm for typical front steer applications (rear steer requires custom steering arms to correct for variations in Ackerman geometry)
- Strengthened radial caliper mounts handle big brake stopping power

HUB ASSEMBLY

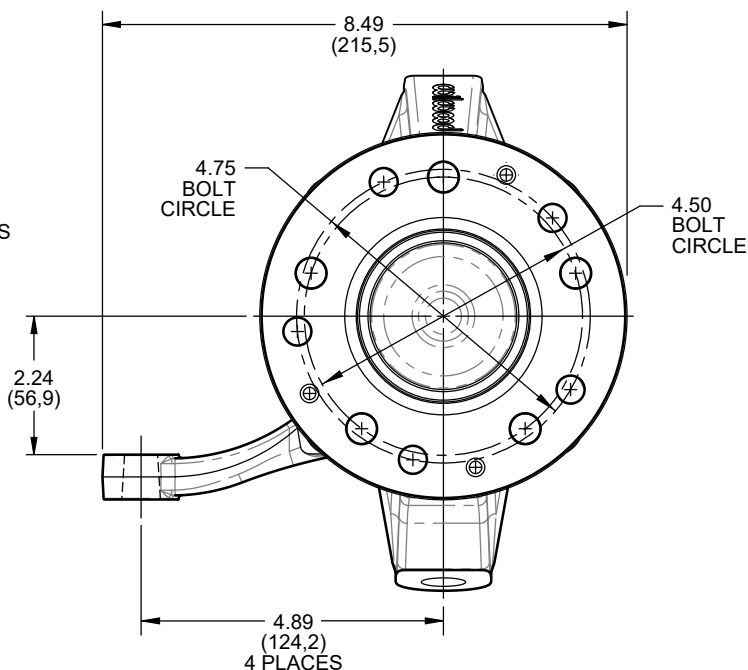

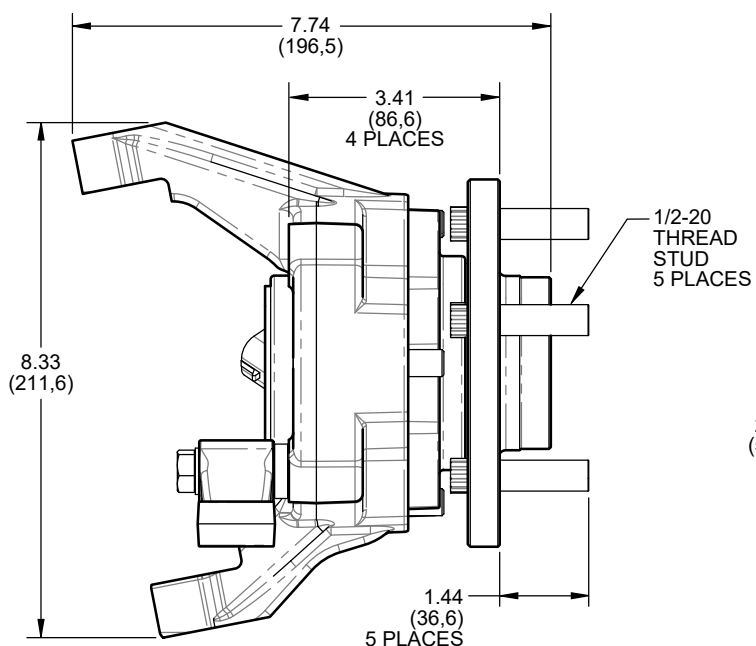

- Precision-machined steel hub assembly with sealed wheel bearing simplifies installation and reduces maintenance
- Dual bolt patterns allow for popular 5 on 4.75" or 4.50" wheels

BRAKE KITS

- Wilwood street-performance brake kits engineered specifically for this ProSpindle part no. **830-17728**, are available with 12.19" to 15.00" rotors and four or six piston calipers (see complete list on last page).

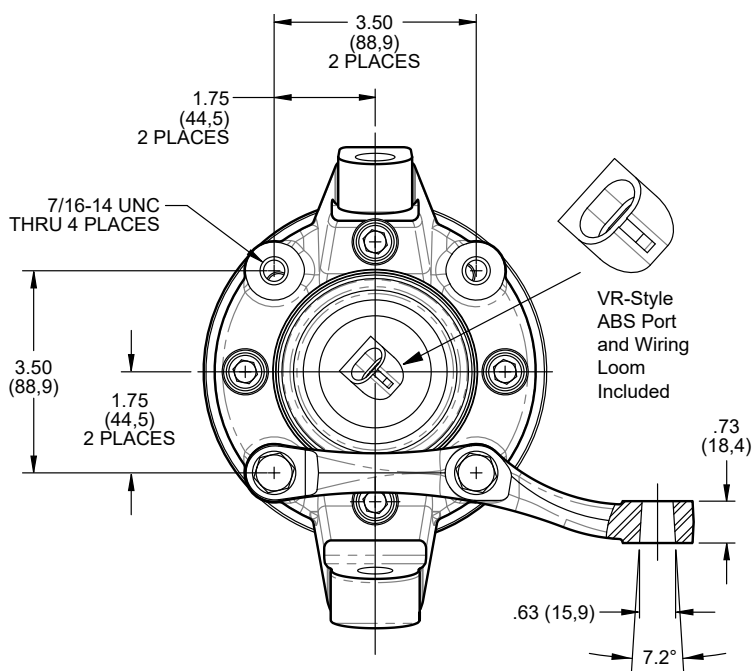

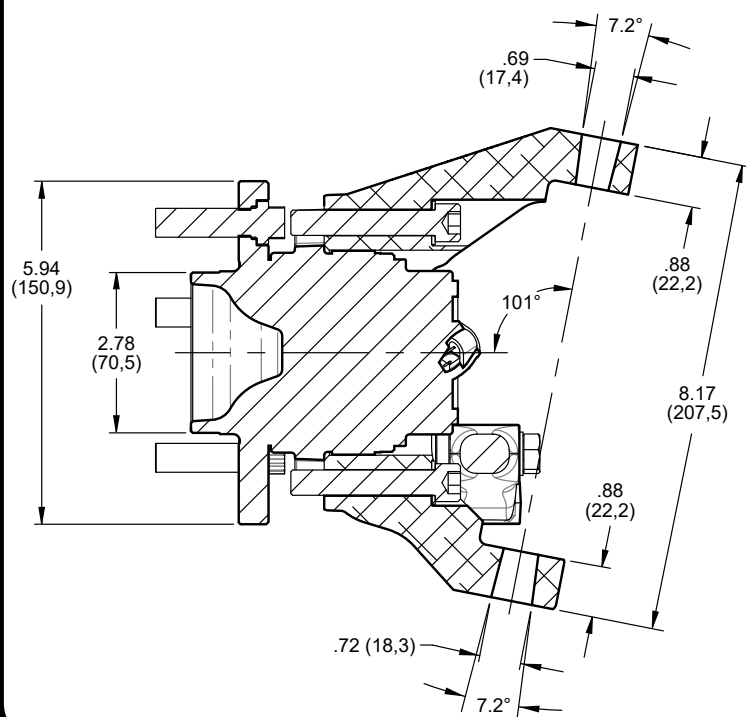

Steering Arm Included
(front steer applications)
