

CPB COMBINATION CALIPER & PARKING BRAKE

Wilwood's hydra-mechanical **Combination Parking Brake (CPB)** Caliper uses hydraulic pressure for stopping and a mechanical locking mechanism for a parking brake. The engineering provides options for drum brake conversions and disc upgrades on rear axles that are not conducive to internal shoe systems.

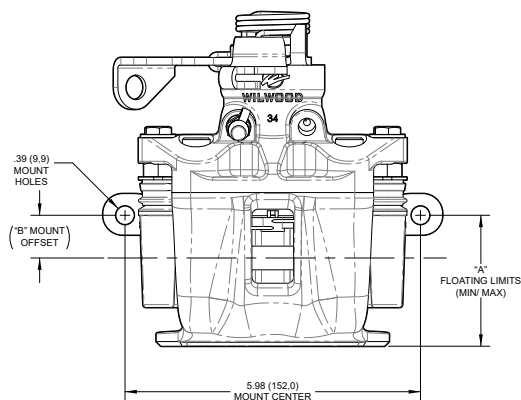

A single stainless steel piston floating design attaches to a fixed radial mount bracket, providing numerous attachment options. The integrated parking brake lock is cable-actuated with common cable ends, accepting OE cables on some vehicles, or new cable ends can be ordered. Rotor diameter and width will determine the correct CPB caliper size.

FEATURES:

- Lightweight forged aluminum caliper with steel bracket and cable actuator
- Sizes for rotor diameters 11.00-13.00" and widths 0.38", 0.81" and 1.00"
- Available powder coated in gloss black or red; many other color options available (additional charges apply)
- Street-performance, fade-resistant **BP-10** brake pads available
