

WIDE 5 STARLITE 55XD 1 TON RACING REAR HUB

NEW
Starlite 55XD Rear Hub
1-Ton Bearing Races

Back when Wilwood introduced the revolutionary Starlite II Wide 5 “bubble” hub, racers used heavy solid hubs, so they quickly became a game changer. This innovative weight-saving design, concentrating metal where the strength is most needed has now been replicated by many companies proving its blueprint superiority.

The **Starlite 55XD** hubs have reduced weight and increased strength by moving the rotor mount toward the hub’s reinforced center, reducing brake torque loading to the hub body. A forged aluminum adapter plate bolts to it, accommodating 8 x 7.00” bolt pattern fixed mount or floating rotors, or the Lug-Drive dynamic mount system.

Starlite 55XD rear hubs incorporate our 5-bolt axle drive flange instead of the traditional 8-bolt design, eliminating more weight.

Wilwood’s Starlite Wide 5 “bubble” hub has been the standard for short track racing for over 40 years. It is the foundation when building your race car’s brakes.
