

FOR IMMEDIATE RELEASE:

Wilwood Disc Brakes Introduces Dual Dynalite Dynamic Mount Rear Drag Race Kit

Camarillo, CA June 1, 2010

Dual caliper kits provide the highest degree of safety, reliability, and unsurpassed stopping power and clamping force to help the racer with a turbo application that needs to keep the car on the line while spooling their system. With two calipers at each wheel, the fluid circuits for each caliper pair can be fully isolated with dual mount or tandem outlet master cylinders. Isolating the fluid circuits prevents complete system failures in the case of a problem with any single caliper or line. Dynamic rotor mounting allows independent expansion between the steel disc and the aluminum hat to minimize thermal distortion and undo stress on the components. Dynamic mount hats are slotted for t-nuts that "float" within the slot to eliminate all bind the thermal distortion on the rotor and hat. Each kit includes forged billet Dynalite four piston calipers, dynamic mount GT series hats with t-nuts and rotor bolts, high strength steel rotors, Wilwood brake pads, mounting brackets, and the hardware necessary to mount the kit on the axles.
