

FOR IMMEDIATE RELEASE:

Wilwood Disc Brakes Announces new front / rear ProMatrix OE Upgrade Rotor Kit for 2005-Present Aston Martin

Camarillo, CA • May 2013

Wilwood Disc Brakes has recently introduced a new front / rear ProMatrix upgrade rotor kit for 2005-present Aston Martin DB9 and 2006-present Aston Martin Vantage. This track tested kit provides big brake styling for use in conjunction with wheel and tire upgrades for street, track, or show. The kit works harmoniously with the original brake calipers, brake pads, master cylinder, and ABS functions.

Kit (P/N [140-13106](#)) comes with 14.00" (front), and 13.00" (rear) GT competition series rotors mounted to forged aluminum hats. GT rotors are fully detail machined from premium grade carbon iron castings, face slotted, and individually dynamic balanced to provide true and precise running at all speeds. The GT series hats help to reduce weight and are black E-coated to resist corrosion while adding to the aggressive competition look inside the wheel.

All of Wilwood's performance brake kits are loaded with cutting edge technology built on years of domination in world motorsports, and proven reliable through Zero PPM defect supply to OEM's. Wilwood's Big Brake Kits are designed to meet the high performance demands of today's tire, wheel and suspension technology.
