

FOR IMMEDIATE RELEASE

Wilwood Has Just Released New 11-inch Internal Drum E-Brake Rear Kits

Camarillo, CA July 26, 2010

Wilwood Engineering's new [11-inch Internal Drum E-Brake Rear Kits](#) are perfect for enthusiasts who have original muscle cars, street rods, classic trucks, street machines and other specialty vehicles that are running smaller diameter rear wheel sizes. This kit will be perfect for all 15-inch diameter wheels and will also work with many 14-inch wheels that are designed to clear disc brakes. The brake kit features Wilwood's special internal drum parking brake design that allows an efficient parking brake system that is easy to install and a snap to hook into the stock parking brake cable system. The kit features a forged billet Dynalite caliper in Red, Black and polished finish for a show appearance. The kit also features an 11-inch rotor that works with the internal brake assembly. The rotor is available in a standard smooth design or slotted and drilled for a more aggressive appearance. This kit has been designed to fit all of the rear axle assemblies that we offer rear brake kits for, as well as the stock Tri-5 Chevy axles, so check out the Wilwood website to see the complete listing. The forged billet Dynapro caliper in this kit will work harmoniously with all of our front brake kits.
